The prince of Wales occasionally enlove a joke over the queen's propensity for giving away Indian shawls. At one Henly regatta he was on a steam launch with a merry party, engaged in scrutinising the other craft on the river. Their attention was especially drawn to a boat containing a pleasure party, one member of which was an elderly lady bearing a remarkable resemblance to the queen, and she seemed bent upon doing all in her power to heighten the resemblance. One of the company on board the launch approached the prince and ventured to draw his attention to the lady in question, jocularly suggesting that it was the queen viewing the regatta incog. his field glass upon her, she rose, and ders of the young girl who was with her. "It is undoubtedly the queen," replied the prince quietly; "I see that she has just presented one of her Indian shawle."

HERE IT IS.

The Little Valve Which Has for Hundreds of Years Prevented the Cure of Diseases in the Air Passages.

Physicians Witness the Death of Thousands Annually, Unably to Reach the Diseased Parts on Account of This Obstacle Created by Nature to Protect the Bron-

It is now acknowledged by all medical men that this little valve, called the epigion tis, has effectively prevented the cure of Consumption and all deep-sented diseases of the respiratory organs for hundreds of years. It is due to its presence at the entrance of the windpipe that all liquid medicines, no matter in what form they are administered or how minutely divided by sprays or atomizers, are prevented from entering the bronchial tuber or lungs; set, if it were not for this little valve, liquids and food would enter these passages and cause instant strangulation and death. The epiglottis is always open to permit the passage of air to the lungs, but so constructed that the slightest contraction of the throat causes it to close over the opening to the windpipe, and prevent the least drop of meisture from entering the passages which lend to the lungs. Try to breathe and swallow at the same time and you will see how perfectly this little valve does its work. Is it any wonder, then, that the number of persons afflicted with Catarrh, Bronchitis and Consumption have steadily increased every year, and that the medical profession should have become excited over the discovery of a dry air germicide, the first ever found, that can be carried to all parts of the head, throat, and lungs in the air you breathe? No other treatment or medicine has ever created such a profound interest among the doctors, and this interest is being increased hourly by the wonderful recoveries made under their own eyes. Not alone among the medical profession has this been felt, but hundreds of thousands of men and women throughout the United States, through free treatments given, and influenced by the knowledge that their money would be returned in case of failure, have tested this new remedy, been cared, and are to-day recommending "HYOME!" to all their friends and acquaintances. There has been for months NO DOUBT WHATEVER in the minds of medical men as to the efficacy of "HYOMEI" in the treatment of Asthma. Coughs, Colds, Catarra, Catarra Desinese, Bronchitis and Consumption, and father and mothers who are acquainted with the honest method used by The B. T. Booth Ca. in introducing "HYOME!" are not doing right by themselves, or their families, if they do not test this new treatment, which costs nothing if it tails to give relief, and can be tested free in all large cities.
